

Contact Center Project

Understanding Cloud Contact Center Architecture

Genesys Cloud CX Deployment

Research Project

"This project formed part of a broader research initiative focused on evaluating and implementing Genesys Cloud CX within an existing contact center environment. The work culminated in a research paper designed to enhance understanding of contact center operations and the practical considerations involved in deploying a solution such as Genesys Cloud CX. The study provides IT project management researchers, students, and industry practitioners with valuable insights into the technical and organizational challenges associated with modern contact center deployments."
